

Study Guide for Week2

Expectations

1. Take a look at the directories of linux and understand where most of the useful commands are sitting.
2. Pay attention to /dev and /proc directories
3. Keep learning the linux commands from the homework1 and our in-class lab note.
4. Certain commands like mount, fdisk, blkid...etc are very useful for handling disk and memories.
5. Other commands like monitoring processes, networking and listing hardwares are very important and we need to play around with those commands along with the basic commands of file systems.
6. VIM Editor which we will talk in next class.
